

AccessiMed

The Problem

Healthcare websites are failing the people who need them most.

 **95.9%**

of websites fail
WCAG standards

 **86M**

disabled Americans
excluded from care

 **56.1**

average errors
per page

-  Federal deadline: May 11, 2026 — healthcare orgs with 15+ employees must meet WCAG 2.1 AA
-  Manual audits cost \$10K–\$50K per website and take 3–6 months — too slow, too expensive
-  Patient portals, telehealth, scheduling — all inaccessible to millions who need them most

Enforcement and Risks of Noncompliance

Noncompliance with the Rule can result in a loss of federal funding or regulatory enforcement by HHS Office for Civil Rights, including investigations and compliance reviews. Section 504 also provides a private right of action for aggrieved individuals. Website accessibility lawsuits are already common under Title III of the ADA (which applies to accessibility of a “place of public accommodation”), with thousands filed nationally each year for the last several years. The new Rule provides a standard for compliance for entities receiving financial assistance from HHS, but it may also encourage litigants to bring claims in the health and human services industry for even minor technical barriers.

Enforcement and Risks of Noncompliance

Noncompliance with the Rule can result in a loss of federal funding or regulatory enforcement by HHS Office for Civil Rights, including investigations and compliance reviews. Section 504 also provides a private right of action for aggrieved individuals. Website accessibility lawsuits are already common under Title III of the ADA (which applies to accessibility of a “place of public accommodation”), with thousands filed nationally each year for the last several years. The new Rule provides a standard for compliance for entities receiving financial assistance from HHS, but it may also encourage litigants to bring claims in the health and human services industry for even minor technical barriers.

WCAG Conformance

95.9% of home pages had detected WCAG 2 failures. This number increased from 94.8% in 2025—reversing a trend of small improvements each of the previous 6 years. Because only automatically detectable WCAG failures were considered, this suggests that the rate of full WCAG 2 A/AA conformance was certainly lower than 4.1%.

This chart shows the percentage of home pages with detected WCAG conformance failures over time:

Impact & Opportunity

A \$660M+ compliance gap that AI can close.

Current Pain

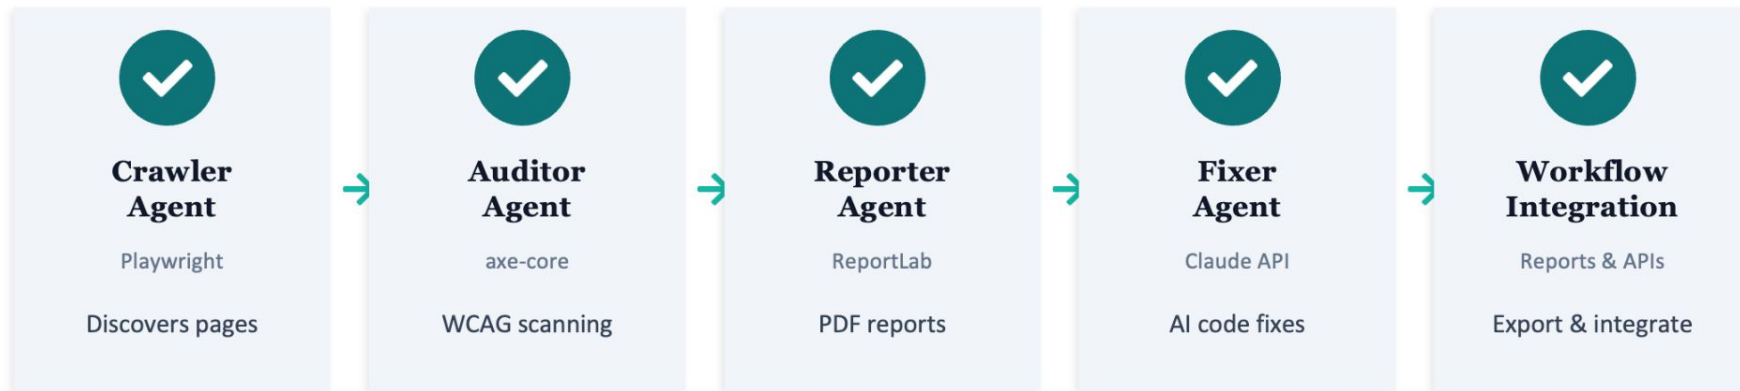

-  66,000+ orgs face federal penalties and loss of funding
-  Audit firms are backlogged — can't serve market by deadline
-  Reports deliver diagnosis, not cure — orgs still need devs to fix code
-  Fragmented tools: scanning, reporting, and fixing are separate workflows

The Opportunity

-  66K orgs × \$10K min = \$660M+ addressable market
-  AI can compress scan-to-fix from months to minutes
-  Developer-ready outputs (GitHub PRs, not PDFs) close the remediation gap
-  First mover with AI-powered fix generation + workflow integration

AccessiMed AI Platform

Multi-agent architecture: from URL to pull request in under 5 minutes.

Orchestration

LangGraph state machine with conditional routing

Data Pipeline

HTML → axe-core → SQLite → Claude → GitHub (full lineage)

Trust & Traceability

Every fix cites WCAG criteria; PRs require human review

What We Built

End-to-end product: from landing page to GitHub pull request.

1

Product Website

React + Tailwind

Clean landing page explaining AccessiMed's value, team, and technology stack.

2

Scan Page

Live UX

Enter URL, real-time progress bar, async multi-page scan in under 30 seconds.

3

Severity Dashboard

Prioritized View

Violations grouped by impact (critical / serious / moderate / minor) with filtering.

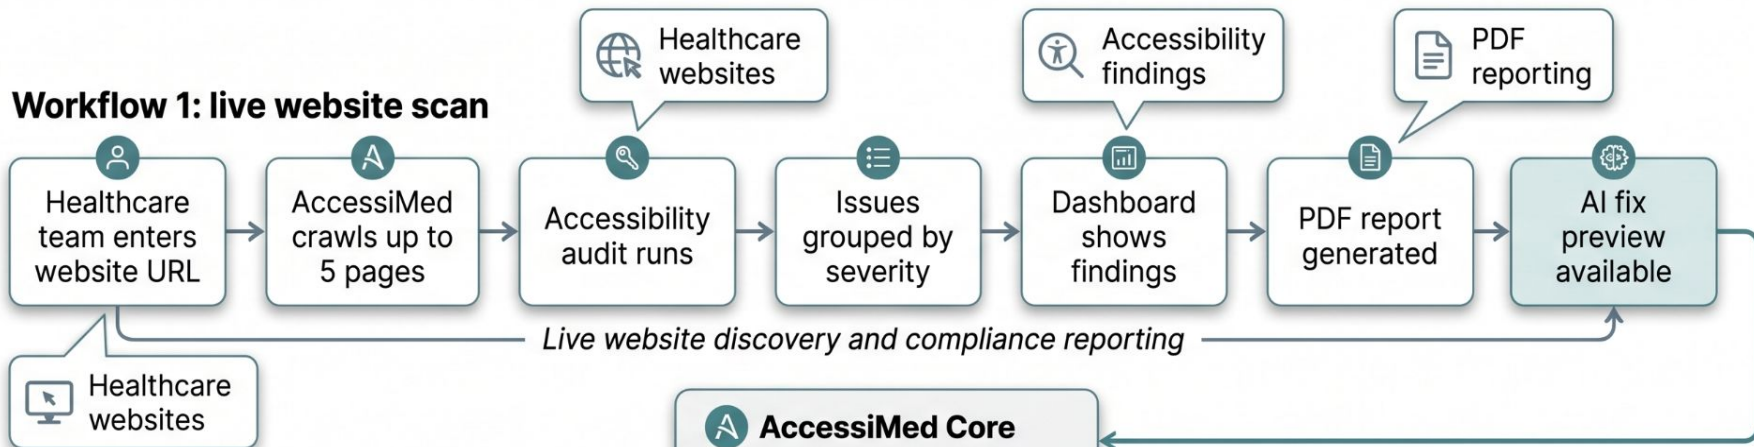

4

Fix & Report

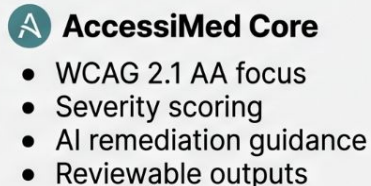

AI-Powered

AI code fixes with before/after diff, PDF download, and one-click GitHub PR creation.

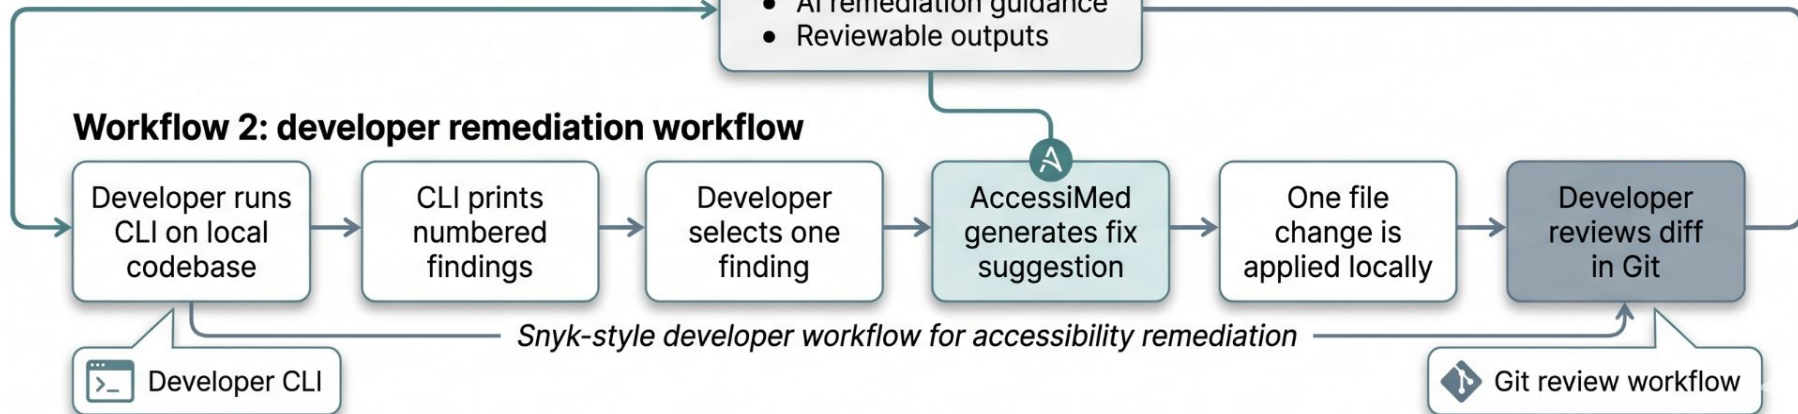

Workflow 1: live website scan

AccessiMed product

Workflow 2: developer remediation workflow

Roadmap & Ask

Where we're going — and how you can help us get there.

Now

MVP Hardening

Error handling, rate limiting,
user accounts, scan history,
API documentation

Q3 2026

Enterprise Features

Continuous monitoring,
team accounts, Slack integration,
custom branding, SSO

2027

Scale & Intelligence

AWS migration, queue system,
mobile scanning, API for
third-party integrations

Our Ask

- ✓ Mentorship from accessibility and healthcare compliance experts
- ✓ Pilot partners: healthcare orgs willing to beta-test before the deadline
- ✓ Integration partners: CI/CD tools, compliance platforms, EHR vendors
- ✓ Your feedback today — help us sharpen this into a production tool

Inclusive healthcare web experiences — at scale.
